

HOW DOES IT WORK? Math Boot Camp will meet for a total of eight days. Each day a professor will review major topics, lead you through examples and answer questions.

(Marysville Campus)

Monday-Thursday:

4pm-6:00pm July 10-13 and July 17-20

You must be able to attend all 8 days to participate.

Students will take the math placement exam on last day of the camp.

Math Boot Camp is an intensive program designed to help students who have not yet taken a math course at Yuba College place into the appropriate math course.

***Students must take the Yuba college placement exam, before starting Math Boot Camp. This will help place the students in the appropriate levels for the review in Math Boot Camp.**

This is a quick refresher program that is based on your specific mathematical needs, and is totally free! Many students take the math placement test “cold,” without any preparation. As a result, many students are placed in a course that they have already taken, in high school or elsewhere and are placed 3 or 4 levels below college level math. If a quick refresher is what you need to achieve a score on the placement exam that will place you in a higher level course, then you are who the Math Boot Camp is designed for. Most students test 1-3 courses above their first placement!
