

“Can you see Yourself Doing Research this Summer?”

“Can you See Yourself Doing Research This Summer?”

Dear Student,

Congratulations on your desire to pursue a degree in a STEM Discipline. STEM or Science, Technology, Engineering, and Math degrees are considered by many to be the most difficult to pursue yet most will agree that they are among the most satisfying and can be the most lucrative. As you are probably already aware, your major will require more critical thinking skills, study time, more units, and more time in college. Summer Research and/or Summer Enrichment Programs are an excellent way to gain hands on research experience to prepare for graduate school and the world of academia in the scientific community. Therefore, I encourage you to peruse the programs listed and apply to more than one in case your top pick is not available. Also please encourage your classmates to also apply because today’s classmates will be tomorrow’s colleagues.

Good Luck!

Tiffany Shaleen Reardon

Engineering Diversity & Achievement Adviser

UC Berkeley Engineering Student Services/Electrical Engineering & Computer Science

Important Tips for Successful Applications:

- 1) Apply only to programs that you are eligible for.
- 2) If you have any uncertainties about applying for the program e-mail the contact person before you apply to the program.
- 3) Once you’ve submitted your application you may want to e-mail the program coordinator to let him/her know that you’ve applied.
- 3) Meet all the deadlines posted. Late applications reflect poorly and may jeopardize your chance of being selected.
- 4) Make sure to give your recommender(s) adequate time to write a polished letter of recommendation for you. Give them as much information as possible about you, the program you are applying to and how you see this program as beneficial to your academic and career goals. If possible, send your recommender a copy of your resume and personal statement or essay questions. It is preferable that your recommender is someone who knows of your potential to succeed in research. Letters from STEM Faculty are preferable.

“Can you see Yourself Doing Research this Summer?”

- 5) Allow yourself enough time to gather required documentation such as official transcripts, medical insurance coverage forms, if needed. Some residential programs require that you have medical insurance in order to participate. If this is the case make sure you have this complete well before you begin the program.
- 6) Apply to more than one program.
- 7) Decide whether or not you can commit time to this program. If you are taking a summer course, decide how much time you will need to study and commute to class. Will this take time away from your research? Some programs have mandatory attendance at programs such as GRE Prep courses. Make sure that your schedule permits you to fully participate in all aspects of the program.
- 8) Familiarize yourself with the program. Avoid blanket statements such as, “I want to be accepted to a summer research program at MIT because it’s a good school.” Instead, talk about specific research being done at that institution and in this program. Give the names of faculty that you would like to work with.
- 9) Last but definitely not least, bring your applications to an advisor so they can review.

REU Programs at UC Berkeley

SUPERB-ITS

The goal of the Summer Undergraduate Program in Engineering Research at Berkeley - Information Technology for Sustainability (SUPERB-ITS) in the Electrical Engineering and Computer Sciences (EECS) Department is to prepare and motivate a group of diverse, competitive candidates for graduate study. The research focus of the REU site will be computer science in the context of information technology for sustainability.

Deadline: February 15, 2014

<http://www.eecs.berkeley.edu/Programs/ugrad/superb/superb.html>

TRUST Student Transfer and Research

TRUST Student Transfer and Research (TRUST STAR) is a nine-week summer program in Cybersecurity, Privacy and Trustworthy Systems, was established to increase the number of eligible transfer students to 4-year programs in computer science and electrical engineering. TRUST STAR targets students who have been educationally or economically disadvantaged and who may not have exposure to the academic environment of a research university.

Deadline: March 1, 2014

“Can you see Yourself Doing Research this Summer?”

AMGEN Scholars Program

The Amgen Scholars Program is a national program to increase research opportunities for students committed to pursuing careers in the sciences. This program provides outstanding science undergraduates with research experience and increases participants' competitiveness as candidates for admission to prestigious graduate and professional institutions. Additionally, this program encourages participants to pursue a Ph.D. or the joint M.D./Ph.D. degree and research careers in the sciences and biotechnology. Applicants from diverse populations and backgrounds are encouraged to apply.

REU's at other Universities

MIT

MIT Lincoln Laboratory applies advanced technology to problems critical to national security. Behind the Laboratory's solutions are researchers with excellent technical abilities and imagination working in cross-disciplinary collaborations to develop systems from the initial concept stage, through simulation and analysis, to design and prototyping, and finally to real-world demonstrations. Majors: Electrical engineering, computer science, physics, mathematics, mechanical engineering, aeronautics/astronautics, materials science, molecular biology, biochemistry, and related fields.

During the summer of 2014, the National Nanotechnology Infrastructure Network will host a Research Experience for Undergraduates (NNIN REU) Program from June through August, hiring approximately 85 interns to work at the fourteen NNIN sites. We are looking for engineering and science students with broad interests across disciplines focusing on nanotechnology.

Minority and female candidates are especially encouraged to apply, along with students with no previous research experience.

The chosen undergraduates taking part in the ten-week NNIN REU program will receive hands-on nanoscience and technology experience through research with applications to bio-engineering, chemistry, electronics, materials science, optics, opto-electronics, physics, and the life sciences. The research projects are designed and supervised by the faculty and technical staff at the NNIN research facilities. Interns work with faculty and graduate students on projects using the unique resources offered at their award site.

Application Deadline: See website

Department of Energy

DOE CCI Program

Community College Internship Program Overview

The Community College Internship (CCI) program seeks to encourage community college students to enter technical careers relevant to the DOE mission by providing technical training experiences at the DOE laboratories. Selected students participate as interns appointed at one of 15 participating DOE laboratories. They work on technologies or instrumentation projects or major research facilities supporting DOE’s mission, under the guidance of laboratory staff scientists or engineers.

Rochester Institute of Technology

The NSF REU Program Imaging in the Physical Sciences is a new program that builds on the strength of the research and educational programs in the interdisciplinary Chester F. Carlson Center for Imaging Science at the Rochester Institute of Technology, extending a rich history of undergraduate research experiences with RIT students to students from beyond RIT’s walls. Our program introduces young scientists to research in a highly interdisciplinary, team-oriented setting, preparing the students for the type of goal-oriented research they are likely to encounter in real-world environments. RIT is now the third largest undergraduate private technical university in the United States.

“Can you see Yourself Doing Research this Summer?”

Louisiana State University

Interdisciplinary Research Experience in Computational Sciences

This Research Experience for Undergraduates (REU) project is a ten week program where students work collaboratively on a wide variety of computational science projects.

The Center for Computation & Technology (CCT) at Louisiana State University (LSU) provides an ideal setting for the REU student to become familiar with interdisciplinary research. With research groups exploring gravitational waves, complex emergent phenomena in material science, or computational music, the participants work on cutting edge research in Computational Sciences.

Deadline: March 1 2014

<http://reu.cct.lsu.edu/>

The Louisiana Alliance for Simulation-Guided Materials Application (LA-SiGMA) is a 7-member alliance of universities throughout Louisiana. Members of LA-SiGMA provide six different sites and numerous projects for the REU student to become familiar with interdisciplinary research. With research groups exploring molecular interactions to model hydrophobic solubility, parallel finite elements on unstructured meshes using PETSc and Sieve, simulations of hydrogen storage materials, etc., the participants work on cutting edge research in material sciences and computational tools.

Deadline: March 1, 2014

<http://reu.lasigma.loni.org/>

Department of Homeland Security

The DHS HS-STEM Summer Internship Program provides a 10-week summer research experience for undergraduate students majoring in DHS-related science, technology, engineering and mathematics (HS-STEM) disciplines. Students have the opportunity to conduct research in DHS mission-relevant areas at federal research facilities located across the country. Participants receive a stipend plus transportation expenses to/from their internship location

Deadline: January 6, 2014

<https://www.dhs.gov/national-hs-stem-summer-internship-program>

Cornell University

“Can you see Yourself Doing Research this Summer?”

The Cornell Center for Materials Research is offering an REU in 2014. Students will have the opportunity to work directly with faculty on interdisciplinary materials research projects involving chemistry, physics, materials science, and engineering disciplines.

Deadline : Check Website

<http://www.ccmr.cornell.edu/education/reu/>

University of Michigan

The Summer 2014 C-PHOM REU Program will run from June 1, 2014 to August 8, 2014. The program provides undergraduate students who are U.S. citizens or permanent residents with an opportunity to conduct ten weeks of summer research with faculty and students in the fields of nanophotonics, nanomaterials, and nanophysics. Opportunities are available in experiment, theory, and computation. Applicants are required to send transcripts and 2 letters of recommendation.

Deadline: February 1, 2014

<http://cphom.engin.umich.edu/research-experience-for-undergraduates/>

Georgia Tech

Georgia Tech Materials Research Science and Engineering Center (MRSEC) REU is a ten-week summer research program designed to attract qualified, underrepresented, minority students into graduate school in the fields of materials and physical sciences.

Deadline: Check Website

<http://www.mrsec.gatech.edu/research-experiences-undergraduates-reu>

NASA ACCESS

The Achieving Competence in Computing, Engineering and Space Science project, or ACCESS, provides summer internships to highly qualified students with disabilities. Students work for 10 weeks during the summer with a NASA mentor in either a lab or office environment. Summer jobs are related to the participant's interests and abilities. ACCESS participants are full-time students, both graduate and undergraduate, from accredited four-year educational institutions. They must have an academic background in engineering, computer science, physics or mathematics with a B average in their major. Participants must also be U.S. citizens.

Deadline: See website

“Can you see Yourself Doing Research this Summer?”

http://www.nasa.gov/offices/education/programs/descriptions/Achieving_Competence.html#.UnLeMvIQFSA

University of Pittsburgh

The iSchool Inclusion Institute (i3) is an undergraduate research program that prepares students from underrepresented populations for graduate study and careers in the information sciences. Students undertake a year-long experience that includes two summer institutes held at the University of Pittsburgh and a year-long team research project. Students are immersed in special-topics workshops, professional development seminars, research projects, and network-building opportunities.

Deadline: January 17, 2014

<http://www.ischool-inclusion.org/about-i3/what-is-i3.html>

Boston University

The Summer Undergraduate Research Fellowship (SURF) Program at Boston University is designed to promote access to graduate education for talented undergraduate students, especially those from minority groups traditionally underrepresented in the sciences: African-American, Hispanic, Native American/Native Alaskan, and Pacific Islander/Native Hawaiian/Polynesian. The SURF Program is supported by funds from the National Science Foundation (NSF-REU; NE-AGEP), the Department of Defense (ASSURE), and Boston University. The SURF Program is open to non-BU students who are rising juniors or rising seniors, and wish to conduct research in the sciences, technology, or engineering.

Deadline: February 15, 2014

<http://www.bu.edu/urop/surf-program/about/>
